Marilyn,

After we completed the excavation in the sinkhole area, we reached the bedrock and fracture system and couldn't excavate any further. We filled the sinkhole area with a lean concrete. The area was backfilled to grade with clean, native materials.

Jean

Jean,

I thought that I heard you mention a membrane covering the sinkhole area of the site during the site visit. If I was not dreaming could you please tell me the extent of the membrane and the type of material it is constructed from? I am sorry for all the questions. I realize you are traveling. Thanks for your continued patience.
